Vision

To make healthcare accessible & simpler for consumers, and health professionals using technology.

To connect the unconnected, and make telecom accessibility, and communication affordable.

Mission

Our mission is to be the leading trusted partner for healthcare providers, consumers and telecom service providers for their needs for the technology solutions.

1. Digital Health

BI & Cloud For Health

BI aggregates data such as medical history & financial metrics, helps to improve patient experience, and increase profit margins. Our cloud services enhance patient engagement, deliver data storage, security, launch new applications & tools quickly, helps team collaboration and reduces operational cost.

Mixed Reality

Mixed reality solutions improve both medical training and planning in minimally invasive surgery, facilitating virtual procedures, instant diagnoses

IoT & Remote Patient Monitoring

With our IoT solutions, clinics keep track of medical equipment, patient in remote areas use wearables & biosensors to send their health info to doctors with clinical applications who use connected electronic tools to access medical data record, personal health info, and derive insights & actions

2. Telecommunication

Connectivity & Access

TeleCodia has experience with fixed & mobile broadband, fiber optic, satellite communication & all the available connectivity services.

Contact Centre Solutions

Our innovative contact center solutions allow communication across multiple channels, with features and functions that simply customer contact

Telecom Infrastructure & Solutions

We provide infrastructure solutions, strategy & planning, deployment of fixed & mobile networks, data, voice and video communication ,project consulting, setup, support & maintenance.

3. Data & AI

Automation

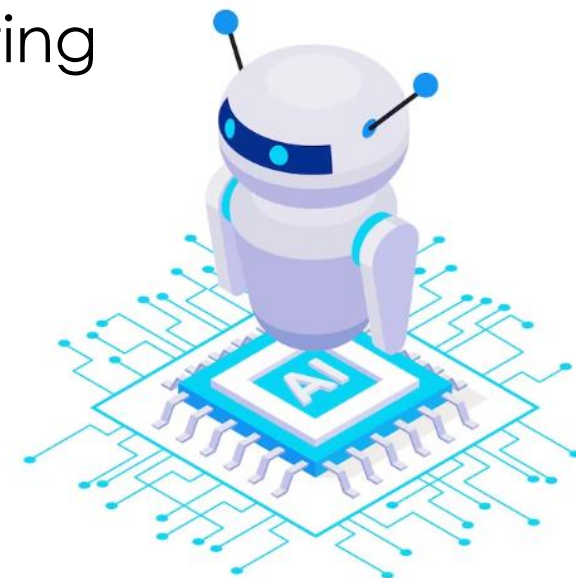

Process Automation enhances efficiency and accuracy. RPA reduces health resources dedicated to menial admin tasks, by efficiently processing patient records.

Software Development

We help with website design, web applications & mobile apps, automate patient care, scheduling, claims processing, Point of Sale, manage medical billing, ERP, inventory management, and spend management etc.

AI & Robotics

AI enhance preventive care, improves clinical diagnosis, treatment and workflows. Medical robots assist in surgery, automating routine tasks, for rehabilitation, and transporting dangerous substance

4. Management Consulting

Data Governance

Our team helps with the data framework that brings people, processes, and technology together ensuring there is a consistent and effective data management across the organization

Risk Management

We put together a plan for risk detection, control, and treatment methodology that our client's need to carry out, and that would help businesses respond to change, increase stakeholder value and deliver business growth.

Policy & SDGs

We also provide consultancy and advice on product development, policy framework, UN Sustainable Development Goals
